

Metallic Meredith

Each season exciting new collections are presented at fabric fairs around the globe where we are introduced to the very latest in colour, design and technology. But all too often the product we're really searching for is not on offer.

The design in the photograph was tailor made to meet the customer's needs. Bischoff Textil AG showed the metallic embroidery in its Winter Collection, perfectly suitable for the ever popular woven jacquard "Meredith", designed and produced by Gessner AG, Switzerland.

The cloth is mainly made of cotton and contains a small amount of man-made fibre and some linen. "Meredith" is reversible, comes in an attractive colour range and in an array of patterns such as spots, florals and geometrics, including a plain partner to suit any taste or complexion.

I'm sure you'll agree that this design would be an outright winner at any Easter Racing Carnival around the country, not to mention the touch of glamour it would add to any day or evening jacket. The design, including its plain matching partner, has just arrived, fresh from the looms in Switzerland. You'll love it!

If you're looking for a special design for your own creations, let us know and we'll find the product that's just perfect for you.

The possibilities are endless. Contact us now!!!
